

How to Use this Section

This section is intended as an aid to identifying the most popular threads on hydraulic hose couplings and adaptors, and hydraulic equipment.

BSP, Metric, American and Japanese thread sizes can be very similar. It is important to measure and match every criteria of thread diameter, thread pitch, seating or sealing type (including angle of seats if present) to accurately determine thread type.

Procedure

Step 1. Investigation

Check for any markings on fitting or equipment which may be a clue to thread type. Country of origin may provide a clue.

Europe	Check DIN/BSP	UK/Australia	Check BSP
America	Check NPT/JIC/UNO/ORFS	Japan	Check JIS

All RYCO parts have a unique part number stamped on to aid identification.

Step 2. Visual Inspection

Depending on whether the male or female thread or both are available, different features will aid identification.

- Are threads parallel or tapered?
- Is there an O ring or a washer seal?
- If cone seats are present are they concave or convex?
- Type and position on fittings.

Step 3. Measure threads

With a calliper, measure the thread diameter. OD of male threads
ID of female threads

Using a thread gauge, determine the number of threads per inch.

If thread gauge is not available, measure pitch from crest to crest of adjacent threads, or count the number of threads in 1/4" and multiply by four for threads per inch.

Chart at bottom of page may assist.

Step 4. Seat angle measurement

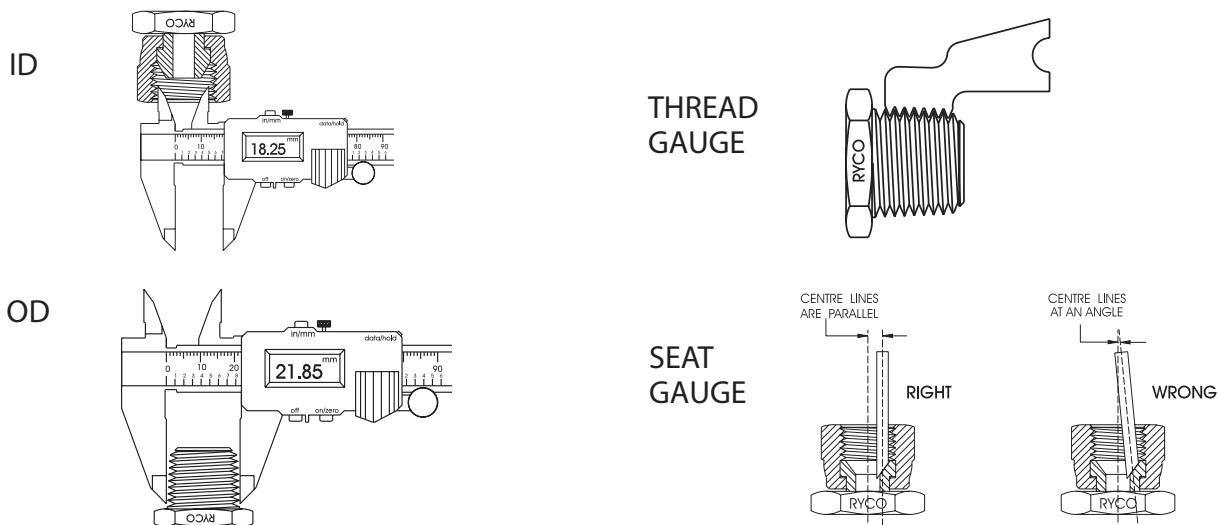

Using a seat gauge, determine the angle of the seat.

Some fittings have dual seats (eg. JIC 37° & SAE 45°) and some have radiused cone.

Step 5. Conclusion

Match the measurements taken against those in the tables that appear to be similar to the coupling under consideration.

A final check can be achieved by mating with an actual coupling of the same thread.

BSPT & BSPP THREADS

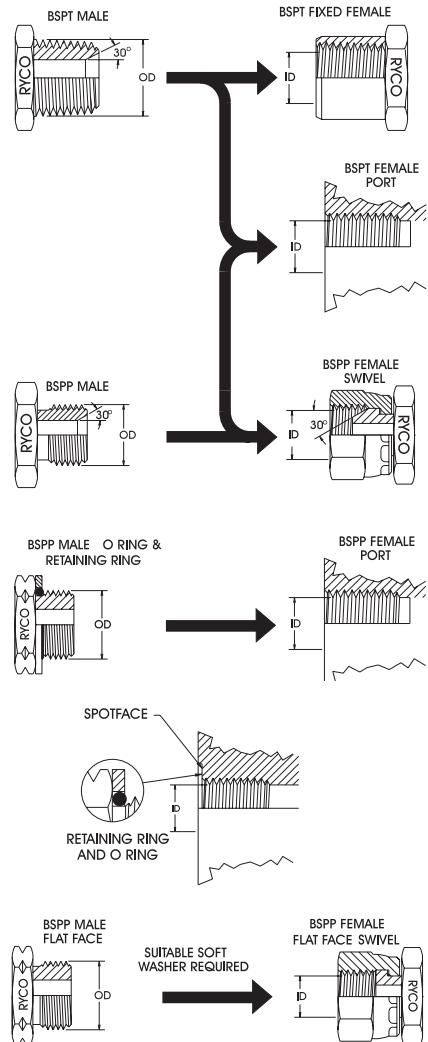

BSP is BRITISH STANDARD PIPE

BSPT is BRITISH STANDARD PIPE TAPER

BSPP is BRITISH STANDARD PIPE PARALLEL

BSPT male threads seal against threads of fixed BSPT or BSPP female.

Contact is made on the flanks of the threads.

BSPT male and BSPP male with conical 30° seat seal against matching conical 30° seat of BSPP female swivel.

BSPP O ring male seals against flat external surface of BSPP female port.

Surface irregularities will require a spot face to ensure effective sealing. Elbows and tees have lock nut to allow orientation of fitting.

BSPP male and BSPP female flat face swivel require a suitable soft washer to seal.

For low working pressure.

Thread size refers to the nominal bore of the pipe. Subtract approx. 1/4" (6mm) from thread diameter measurement for nominal pipe size. Pitch is Threads Per Inch (TPI). "Gas" "R" & "G" also refer to BSP. "Male Iron (Pipe)" may be BSP or NPT.

NPT & NPS THREADS

NPT is NATIONAL PIPE TAPER (AMERICAN)
NPS is NATIONAL PIPE STRAIGHT (PARALLEL)
NPTF is NATIONAL PIPE TAPER FOR FUEL
NPSM is NATIONAL PIPE SEAL MECHANICAL

National Pipe threads are similar in function to BSP threads but are not generally interchangeable.
 NPTF threads (also known as Dryseal) are an improvement to NPT. Controlled truncation of threads mean the metal to metal thread seal is at root and crest of threads.
 All RYCO threads are NPTF.

Subtract approx. 1/4" (6mm) from thread measurement for nominal pipe size.

Pitch is threads per inch.

JIC 37° FLARE & UN O RING THREADS

JIC is JOINT INDUSTRIES COUNCIL
 UN is UNIFIED NATIONAL

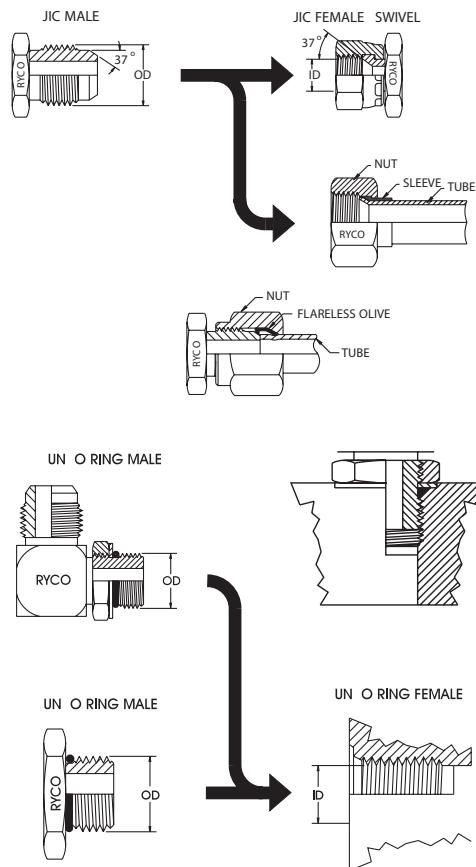

JIC & UN O Ring thread forms are the same but method of sealing differs.

JIC male has 37° flare which seals against 37° seat in female.

Male can also seal against 37° flared tubing with JIC nut and sleeve.

Male can also be used with J-Lok Female Nut and Flareless Olive on imperial OD tubing.

UN O ring seals with O ring compressed between hex boss of UN male and 12°/15° tapered bore of UN female port. For elbows and tees, back up washer and lock nut allow orientation of fitting to required direction.

JIS THREADS

JIS is JAPANESE INDUSTRIAL STANDARD

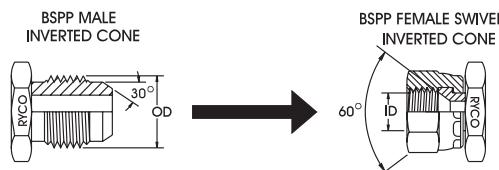

There are three popular coupling styles in Japan.

- Threads commonly used on Komatsu equipment 30° cone have metric thread form.

MALE THREAD OD & PITCH	DASH SIZE	FEMALE THREAD ID
M14 x 1,5	-1415	12,5
M18 x 1,5	-1815	16,5
M22 x 1,5	-2215	20,5
M24 x 1,5	-2415	22,5
M30 x 1,5	-3015	28,5
M33 x 1,5	-3315	31,5
M36 x 1,5	-3615	34,5
M42 x 1,5	-4215	40,5

- Most other Japanese equipment use couplings with a 60° concave (inverted) seat and British Standard Pipe Parallel threads. They are not interchangeable with BSPP conical seat couplings, since the flare is not inverted.

Refer to BSPP section for dimensions of threads.

- The Japanese tapered pipe thread connector is identical to and interchangeable with the BSPT (tapered) connector. The Japanese male thread does not have a 30° Flare, and will not mate with the BSPP female swivel with conical seat.

The threads conform to JIS B 0203, which are the same as BSPT threads.

The seal on the Japanese tapered pipe thread connector is made on the threads.

Note Re: Komatsu Style Flange Fitting

The Komatsu style Flange fitting is nearly identical to and fully interchangeable with the SAE Code 61 flange fitting.* In all sizes the O ring dimensions are different. When replacing a Komatsu style flange with an SAE style flange, an SAE style O ring must always be used.

*5/8" is a JIS Standard and is not in the SAE Standards.

METRIC DIN THREADS

DIN is DEUTSCHE INDUSTRIE NORMEN
(German Industrial Standard)

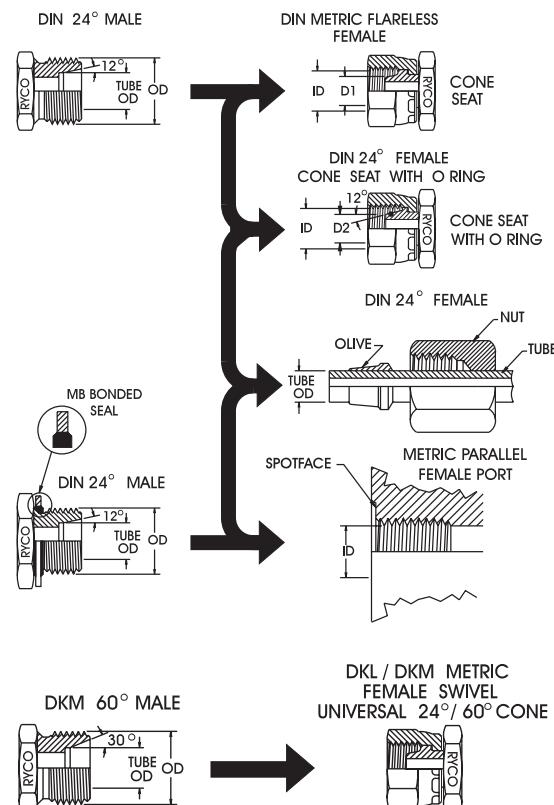

- DKL is DICHT KEGEL LEICHT (Metric Light Series 24° Cone)
- DKS is DICHT KEGEL SCHWER (Metric Heavy Series 24° Cone)
- DKOL is DICHT KEGEL O RING LEICHT (Metric Light O Ring Series 24° Cone)
- DKOS is DICHT KEGEL O RING SCHWER (Metric Heavy O Ring Series 24° Cone)
- DKM is DICHT KEGEL METRIC (Metric 60° Cone)

DIN systems consist of a common male thread with 24° cone seat which can seal with:
Cone Seated Female Swivel;
Female Swivel with Cone Seat and O ring;
Tube, Nut and Compression Olive;
or into metric threaded port with bonded washer seal.

The most common series are DKS/DKOS Heavy Series and DKL/DKOL Light Series. These use the same thread sizes and pitch but have a different sized tube recess at bottom of 24° cone.

Same thread sizes of DKS and DKL series should not be interchanged as the tube recess sizes and sealing cone diameters are not the same.

RYCO DKL Female Swivels up to M26 size have universal 24°/60° cone and will interchange with DKM series, which has 60° cone.

ORFS system consists of ORFS Male with O Ring in Face, and Flat Seated ORFS Female Swivel Nut.

The Swivel Nut can be slipped back to help installation in tight situations.

The prominent position of the O Ring on the Male fitting makes it easy to inspect the condition of the O Ring.

RYCO Code 62C fittings conform to the flange OD and bolt hole patterns of SAE Code 62 but require special flange clamp halves.

The RYCO Code 62C flange heads are thicker than SAE Code 62 and measure T = 14,2mm in all sizes.

RYCO Code 62C flanges have similar dimensions to the Caterpillar XT-5 range of flanges.
